

# Dual Battery Voltage Meter (IP67)

- Monitors two separate battery banks simultaneously 12 / 24V DC.
- Displays voltage and provides high and low voltage alarms (on screen)
- Highly robust design specifically for military applications.
- Simple to use.

The Merlin SVM-7001 voltage meter is designed specifically for military applications and is capable of monitoring two separate battery banks simultaneously.

The unit's robust design means it is capable of withstanding the harshest of environments.

The unit is very simple to operate. The three position rocker switch is clicked to the left to read battery bank one and to the right to read battery bank two. Resting in the centre position, the unit is "off" consuming no power whatsoever.

The SVM-7001 is designed to meet IP67. Chemical conversion coating to MIL-DTL-5541 Class 3, Type II. Primer to DEF-STAN 80-206. Top coat to DEF-STAN 80-161. All hardware grade 316 stainless steel.
